

## **NEW!** BOLT STAR® Square Foundation Edition

Now you can attach BOLT STAR to a wood form for ease of setting 4 anchor bolts in a concrete foundation or pad. The applications are unlimited, including concrete piers, square foundations for light poles, spread footings, and pads for industrial, electrical machinery and equipment.

### **3 Ways Contractors Benefit**

- 1) Increased Productivity** – contractors report savings of half the time it takes to set up and pour compared to building wood templates that require measuring, cutting and hole drilling
- 2) Reusable Tool** – hose off and use over and over again!
- 3) Reduces Risk** – by creating a standardized, more efficient process for achieving consistent accuracy and quality. Lowers the risk of bolt "leaners" and costly rework.

### **Innovative Features**

- Over 40 Templates in 1, featuring both 5" to 10" bolt square and 7" to 14" bolt circle patterns
- Up to 1" diameter anchor bolts – no hole drilling required
- Kit includes Bolt Star 30" for 24" or greater square forms, eight 1-1/2" #10 self-tapping screws
- Red "Square Form Adaptor" also sold separately for use with BOLT STAR 18" or 24" tools
